

What is HBP and GI Surgery? aa

What is HBP and GI Surgery?

The general surgical treatment of benign and malignant illnesses of the liver, pancreas, gallbladder, and bile ducts is known as hepato-pancreato-biliary (HPB) surgery. These surgeries rank among the most difficult and intricate ones done in [gi surgery](#) general surgery, and they call for a high level of knowledge and proficiency. Diseases affecting the organs of the body involved in digestion are treated with gastrointestinal surgery. This includes the stomach, small intestine, big intestine, rectum, and esophagus. The pancreas, liver, and gallbladder are also included.

What are GI surgery and HBP?

Surgery or gi surgery All GI problems are surgically managed in gastroenterology. From conditions affecting the stomach, small intestine, and large intestine to those affecting the esophagus (food pipe), including cancer. This covers minimally invasive procedures like Robot-assisted surgery, open procedures, and endoscopic treatments.

Hepato- Pancreatic- Biliary surgery, or HPB surgery, is a branch of GI surgery that only treats conditions affecting the liver, pancreas, and biliary system. As these procedures need greater degrees of skill and are not typically performed by standard GI or General surgeons, [hpb specialist in Delhi](#) are highly qualified to perform difficult surgeries in this region. Even the most complicated GI and HPB operations can be handled by hpb specialist in Delhi.

GI and HBP Surgery process

To complete the surgery effectively and safely, GI and Hepatobiliary Surgery requires several specialized high-tech devices, including the ultrasonic dissector, advanced coagulation, intraoperative ultrasonography, etc. Because of this, it must only be carried out in specialized facilities by skilled gastroenterology surgery doctors in hpb specialist in Delhi who work within a multidisciplinary framework where surgeons, oncologists, hepatologists, gastroenterologists, radiologists, etc. collaborate to create the best treatment plan for the patient.

Surgical procedures for HPB and GI

Pancreatic, biliary, and other complex hepatic (liver) procedures, including but not restricted to:

- Major and minor liver resection
- liver tumor removal
- Resection of the pancreas for benign and malignant conditions, including the Whipple procedure
- A bile duct is cut.
- Bile duct restoration
- complicated gallbladder removal

When necessary, robotic gi surgery techniques can be used to execute any of these surgical operations (including major pancreatic surgeries and the Whipple surgery) in a less invasive manner.

The GI and HPB (Hepato-Pancreatic-Biliary) procedures are designed to:

Promote research into the understanding of normal and disordered function, as well as management of the gi surgeon in Delhi tract and hepato-pancreato-biliary system, which includes the esophagus,
