

## Orthopedic Implants Market

## Orthopedic Implants Market

Orthopedic implants are devices that are placed inside or on the surface of the body, intended to replace missing body parts or provide support to organs and tissues. These devices are typically made of metal, plastic, or a combination of the two and are designed to mimic the function of the natural bone or joint they are replacing. Orthopedic implants are used in a wide range of procedures, including joint replacements, spinal surgeries, and fracture repairs.
