

Beauty Is Truth, Truth Beauty : Treatments for a Flawless Skin

Our skin and lips are one of the most prominent features of our face. A symmetrical face and clear skin can instantly cast a lasting impression and give your self-esteem a boost. Lip fillers are hyaluronic acid (HA) based injections used to enhance the shape and volume of lips. The [best lip fillers in Chandigarh](#) help you achieve a more symmetrical appearance and reverse the signs of ageing. The treatment is preceded by a consultation with your surgeon, who guides you through the process and customises a treatment plan that will complement your facial structure and give you the desired results. During this consultation, you are also acquainted with the precise cost of the procedure, aftercare tips, and any precautions that you might need to keep in mind before getting the fillers. The fillers will be injected only after administering anaesthesia to numb the area of concern.

Your lips can show slight swelling and bruising after the treatment. The pain, if any, will subside within a day following your treatment, and the swelling will go away within two to seven days of your treatment. Take note that even the best lip fillers in Chandigarh do not deliver permanent results. Generally, lip fillers last for anywhere between 12 to 18 months.

The secret to enhancing your features even more is maintaining spotless, plump, and radiant skin. Over time, sun exposure and ageing, in general, can dull our skin and even give rise to problems such as pigmentation, fine lines and wrinkles, dark circles, and much more. Not only are these an aesthetic concern, but also a hindrance to your confidence and self-esteem. However, as is said, “necessity is the mother of invention”—there prevail numerous treatments in the 21st century for smooth and spotless skin. You can get rid of pigmented and textured skin with a Dark Circle Treatment in Chandigarh. One of the most effective treatments against pigmentation is Dermafrac.

Dermafrac therapy is a revolutionary blend of serum infusion therapy and microneedling. The process of micro-needling creates micro-channels in the skin via fine needles. Potent serums are then administered to your skin via these micro-channels. The entire procedure ensures that the serums are absorbed deep into the skin while simultaneously stimulating your skin’s natural collagen production and healing abilities. The serums are customised to address your specific skin condition. If you’re looking for a non-invasive [dark circle treatment in Chandigarh](#), Dermafrac is your answer. Be the beauty that you were meant to be with these natural and effective skin treatments.
