

## icsi treatment in Delhi - Dr Rhythm Guptaaa

[ICSI treatment in Delhi](#), process begins like IVF with administration of hormonal injections to the female partner to develop numerous eggs in the ovaries. This is followed by egg retrieval. On the same day semen sample is collected from the male partner or a sperm donor. A skilled embryologist then selects the healthiest sperm and injects it into the egg using a specialized micromanipulation technique under a high powered microscope in IVF lab.
