

Amazing! Hippos can turn the tables, making lions their scrumptious snack! aa

Hippos are large, have thick skin, and are capable of living both on land and in water. They often live in areas of rivers, lakes and swamps, and are one of the most diverse mammals in Africa due to their ferocity and strength.

Lions often choose to hunt hippos to demonstrate their strength and demonstrate territorial sovereignty. But not all hunts go smoothly and adult hippos are ready to give lions painful lessons.

A lion hid on a rock to avoid the hippo's attention, but it was quickly discovered. The hippo is very sensitive when raising its young and immediately rushed to attack the lion.

The lion successfully dodged the attack and was forced to jump into the water to escape. Fortunately, the hippo did not intervene in this situation and the lion safely climbed ashore.
