

Floating Roof Tank Seal Inspection Services

At Agasti, we understand the critical importance of maintaining operational safety, environmental protection, and regulatory compliance. The Pollution Control Board (CPCB) & The Ministry of Environment's strict regulations on the maintenance of tank seals are essential to control emissions and prevent leaks.

Our Tank Seal Inspection Services are designed to help you:

1. **Comprehensive Seal Inspections** – We conduct detailed inspections of floating roof tanks to assess wear, damage, and operational efficiency, ensuring optimal emission control.
2. **Leak Detection and Repair** – Our expert team uses advanced techniques to identify leaks, preventing environmental hazards and product loss. We provide immediate repairs to minimize downtime.
3. **Detailed Compliance Reporting** – Post-inspection, we offer comprehensive reports detailing seal conditions, any necessary repairs, and recommendations to ensure full regulatory compliance.
4. **Preventive Maintenance Programs** – To extend the lifespan of your tanks and ensure continuous compliance, we offer scheduled maintenance programs based on your specific needs.

With Agasti's in-depth expertise and adherence to regulatory standards, we ensure minimal environmental impact and maximizing operational safety.

Let Agasti help you stay compliant with the CPCB's rigorous standards.
