

DO YOU WANT TO KNOW WHO NEEDS ICSI TREATMENT? aa

Infertility is an emotional and physical challenge faced by countless couples across the globe. In a country like India, where starting a family is often considered an important milestone in married life, infertility can be particularly distressing. Fortunately, medical advancements in the field of assisted reproductive technologies (ART) have opened up a new world of hope. Among the most effective and innovative treatments available today is ICSI treatment, or Intracytoplasmic Sperm Injection . For couples seeking trusted, expert care, [ICSI Treatment for Infertility in Delhi](#) at Shivam IVF provides a highly specialized solution that brings dreams of parenthood closer to reality.

Understanding ICSI Treatment

Intracytoplasmic Sperm Injection (ICSI) is a form of In Vitro Fertilization (IVF) that is specifically used to overcome severe male infertility issues. Unlike traditional IVF, where many sperm are placed with an egg in the hope that one will fertilize it, ICSI involves the direct injection of a single healthy sperm into a mature egg. This method significantly increases the chances of fertilization and is especially beneficial when sperm count is low, sperm motility is poor, or sperm morphology is abnormal.

Who Needs ICSI Treatment?

ICSI is typically recommended in the following cases:

- Very low sperm count
- Poor sperm motility or movement
- Abnormally shaped sperm
- Previous IVF failure due to poor fertilization
- Obstruction in the male reproductive tract
- Use of frozen sperm or sperm retrieved surgically
- Unexplained infertility

For couples experiencing any of these issues, ICSI Treatment for Infertility in Delhi at Shivam IVF offers a targeted and effective approach.
