

Figure 1. The relationship between the logarithm of the number of species and the logarithm of the number of individuals. The data are from 100 samples of 1000 individuals each, taken from 100 communities, each with 100 species. The data are from a simulation of a community with 100 species, each with a frequency of 1%. The data are from a simulation of a community with 100 species, each with a frequency of 1%.
